(54) Title: COMBUSTION UNIT FOR TURBOCHARGER

(57) Abstract: A combustion unit (15) is primarily intended to feed a turbocharger (18) to generate a compressed air supply to an internal combustion engine (10). The unit (15) is supplied with exhaust gasses from the engine and these gases are mixed with air in the unit combust material in the exhaust gases and give an enhanced supply to the turbocharger. The combustion unit is generally cylindrical and air is added to the exhaust gases at the inlet (13) to promote combustion and the combustion gases pass at high speed through an annular space towards an outlet (17) leading to the turbocharger (18).
